

Projet du groupe : 372420-379902
numéro du groupe 162

Documentation 10 / 10

README/HELP 3 / 3

CONCEPTION 3 / 3

Documentation (comments in the code) 4 / 4

Justification of points deduction:

Step 1 30 / 30

1.1 Functional evaluation 16 / 16

Start of the game and display of the spawn area of the player (can be different depending on last step implemented) 3 / 3

ICMonPlayer can move in the 4 directions and cannot walk outside the grid or on the obstacles 5 / 5

ICMonPlayer is properly oriented and animated while moving 2 / 2

ICMonPlayer has contact interactions with the cells: it is displayed and animated differently depending on if he is moving on ground or on water 2.5 / 2.5

ICMonPlayer is able to collect a ball using a distant interaction (L key or other key) (it is the collect itself that is graded, regardless of the events) 2.5 / 2.5

Reset (hard reset of the full game at least) ('R' Key) 1 / 1

1.2 Code production 14 / 14

actors hierachy: ICMonActor, ICMonPlayer 3 / 3

collectable items: ICMonItem, ICBall 3 / 3

Code de ICMon 2 / 2

Code de ICMonBehavior et ICMonCell 3 / 3

Code des interactions 3 / 3

1.4 Justification of the deducted points

Step 2 30 / 30

2.1 Functional evaluation 15 / 15

Abilty to start and complete an ICMonCollectEvent 2 / 2

Ability to have interactions conditioned by events (the player interactions with the ICSshopAssistant are different depending on the started event) 5 / 5

Ability to have the completion of an event starting an another event (end of collectEvent starts end of game in step < 4), or chained event in step >=4 3 / 3

Dialogs (which can have a different content depending on the started event) 3 / 3

Doorway passage from town to lab 2 / 2

2.2 Code production 15 / 15

ICMonEvent + ICMonCollectEvent + EndOfTheGameEvent (2.25 points + 1 + 1) 4.25 / 4.25

NPCActor + ICShopAssistant 1 / 1

Action: LogAction, Register/UnregisterEventAction, RegisterInAreaAction, StartEventAction and their integration to the code 4 / 4

Integration of Dialogs (in code of IcmmonPlayer + IcmmonCollectEvent en EndOfTheGameEvent) 1 / 1

Door class 0.5 / 0.5

Lab class 0.25 / 0.25

Message Handling by ICMon (PassDoor message) + modeling of messages or other means to make the game components communicate with the game) 4 / 4

2.4 Justification of the deducted points

Step 3 21 / 21

3.1 Functional evaluation 10 / 10 ----- (+2 as bonus)

new Arena area and transition from Town to Arena and back 0.75 / 0.75

Pokemon created in Arena 0.25 / 0.25

Switching to battle mode when interacting by contact with the pokemon in the arena (independently of the display of the battle pause menu), 1 / 1

Display of the graphical battle pause menu (with pause of the current area simulation) 2 / 2

Graphical selection of two actions during battles (Runaway and Attack) 2 / 2

Logic of Battles (selecting repeatedly the Attack action leads both opponents to suffer damages (hp bars affected), once the opponent is beaten, the battle ends and the simulation of the main area restarts, the beaten opponent has then left the area, selecting the runaway action ends the battle as well. 4 / 4

Graphical selection of the Pokémon to fight (bonus) 2 / 2

3.2 Code production 11 / 11

Hierarchy of Pokémons with at least two Pokémons 1.5 / 1.5

Arena class with a registered Pokémon 0.5 / 0.5

Class IcmmonFight (half of the points for the fsm) 3.5 / 3.5

PokemonFightEvent 0.5 / 0.5

fight method in IcmmonPlayer + handling of the SuspendWithEvent message 3 / 3

LeaveAreaAction and its integration to the code (in ICMonPlayer or AfterPokemonSelectionFightEvent) 0.5 / 0.5

SuspendEventAction and its integration to the code 0.5 / 0.5

RequestPauseAction and RequestResume actions and their integration to the code 1 / 1

3.4 Justification of the points added or deducted

Step 4 10 / 10

4.1 Functional evaluation 5 / 5

The game starts in the House area with an introductory dialog 0.25 / 0.25
 Gary appears in the House and prof Oak in the lab 0.5 / 0.5
 no battle can be launched with the Aerean Pokemon before the interaction with
 prof. Oak. 0.25 / 0.25
 The interaction between prof. Oak and IcmOnPlayer opens a dialog. Prof. Oak then
 gives the first Pokémon to ICMonPlayer 1 / 1
 The ICBall is spawned in Town and only if the interaction with Prof. Oak has
 occurred 0.5 / 0.5
 The dialog with the ICShopAssistants depends on whether the interaction with
 prof Oak has occurred or not. No dialog occurs with the ICShopAssistants if the
 ICBall is collected but the battle with Gary has not yet taken place 0.5 / 0.5
 IcmOnPlayer can fight Gary once he gets the Pokémon (no interaction with Gary
 should be possible before that) 0.5 / 0.5
 IcmOnPlayer fight Gary's Pokémon and Gary leaves the House area if his Pokémon
 is beaten 1 / 1
 The endOfGame events starts once IcmOnPlayer and Gary have fought (the dialog
 with the ICShopAssistants no more advise ICMonPlayer to visit prof.Oak) 0.5 /
 0.5

4.2 Code production 5 / 5

 Classes House, Gary and Prof. Oak 0.75 / 0.75
 IntroductionEvent with related actions 0.5 / 0.5
 ICMonChainedEvent and related actions 1 / 1
 FirstInteractionWithOakEvent and related actions 1 / 1
 FirstInteractionWithGary and related actions 1 / 1
 IcmOn.events() method + creation of the ICBall in Town 0.75 / 0.75

4.4 Justification of the points added or deducted

Step 5 (Extensions) 20 / 20

 Descriptions : Points :
 New dialogs 4
 Moving people and animations 4
 Music 5
 Starting menu 2
 New items 4
 New fight actions 4

Overall penalties (malus globaux) -1 (as a negative number)

 Justification :
 Don't let unusefull code even in comments -1

Overall bonuses 5

Justification :
 The number of extensions you give the understandability of your conception
 files, your code very clean.

=====

TOTAL OF POINTS: 125 / 121 (+ max 5 bonus)

=====

Overall appreciation of the project

This project is absolutely perfect, well done guys !
